Python Programming

From first variables to a small application - logic you can carry into any field.

Programmation Python

NEXT COHORT	SCHEDULE	DURATION	SEATS LEFT
18 April 2026	Saturday 15:00–18:00	12 weeks	5

WHAT YOU WILL BUILD

- Write readable Python using variables, conditionals and loops.
- Break a problem into functions and test each piece.
- Work with lists, dictionaries and simple files.
- Ship a small command-line project.

SYLLABUS OUTLINE

01 Variables, types and input
Store values, read input and print results with clear, readable code.

02 Conditionals and loops
Make decisions and repeat work without repeating yourself.

03 Functions and clean structure
Break a problem into named functions and test each piece.

04 Collections
Lists and dictionaries for organising real data.

05 Files and small data projects
Read and write files, then shape the data into a small report.

06 Project week
Build, debug and present a command-line project from an empty file.

CAPSTONE & STUDENT OUTPUT

A command-line application

A working command-line tool with a README, a short test list and a live walkthrough.

STUDENT OUTPUT
A tested Python application, a clean repository and a code walkthrough.
