Robotics for Kids

First machines, first circuits, first moment of "we built that".

Robotique pour Enfants

NEXT COHORT	SCHEDULE	DURATION	SEATS LEFT
18 April 2026	Saturday 10:00–12:00	8 weeks	6

WHAT YOU WILL BUILD

- Assemble and wire a working robot from a guided kit.
- Explain what a sensor does and use one in a small project.
- Debug a simple programme with a mentor's guidance.
- Present a finished build to the group.

SYLLABUS OUTLINE

01 How machines move
Motors, wheels and structure: the mechanics behind a first robot.

02 Circuits and safety
Power, switches and sensors, wired safely on a breadboard.

03 First programme
Sequences, loops and timing that make the robot move on purpose.

04 Sensor logic
Read a distance sensor and turn its signal into a decision.

05 Team build
Design, assemble and test a shared robot against a simple brief.

06 Demo day
Present the build, explain how it works and refine one weakness.

CAPSTONE & STUDENT OUTPUT

A line-following robot

Students deliver a working robot that follows a marked course, documented with a simple build journal and demonstrated on demo day.

STUDENT OUTPUT
A working line-following robot, a build journal and a demo-day presentation.
